WORK EXPERIENCE

Akshara+ | Software Engineer

Jan 2025 – Present

- Built a Python backend with Django engaging and interactive exercises to improve math literacy.
- Designed gamified learning modules and reusable frontend components to scale across multiple grade levels.
- Collaborated with education experts and designers to deliver accurate and accessible and mobile-friendly content.
- Utilize artificial intelligence to auto-generate questions to test course competency.

Prometheus Group | Software Engineer

Apr 2024 – Jul 2024

- Delivered full stack features using React (TypeScript + Redux) and C#/.NET used in large-scale enterprises including Exxon and Marathon.
- Refactored legacy systems, one being a dynamic query builder using Dynamic LINQ for filtering datasets at scale—cutting code by 90% and significantly improving performance and developer experience.
- Converted large codebases from React class components to functional components, enabling better testing and performance.
- Initiated major developer experience upgrades, including implementing unit testing strategies and CI/CD pipeline improvements, refactoring mono-repo structure for faster onboarding and streamlined deployments, and pushing adoption of shared UI components and code styling standards across teams.

Relias | Associate Software Engineer

Apr 2022 – Nov 2023

- Built full-stack features for a job board used by 1M+ healthcare professionals using Angular and Java Spring Boot.
- Developed applicant notes feature in the Java backend, including creating, saving, deleting, editing, and organizing notes, improving the user experience for recruiters.
- Core contributor to a Vue.js platform from the ground up, including secure auth, CMS integration (Craft), and profile management.
- Championed accessibility and maintainability by achieving 90%+ unit test coverage on frontend modules and pioneering refactors for readability, performance, and accessibility (keyboard nav, screen reader support).
- Mentored peer and senior engineers and quality testers and improved team velocity using living documentation and reusable testing plans.
- Sole associate level engineer to be recommended promotion by a manager within the first year on a team of 10+ senior engineers.

EDUCATION

University of North Carolina at Chapel Hill *Dec '21* | Computer Science B.S. + Chemistry Minor

Relevant Coursework: Serious Games, Machine Learning, Cybersecurity, Web Development

SOLO PROJECTS github.com/supersayan

- SmashVODs: Python automation tool that catalogs and organizes 2000+ esports VODs into dynamic Notion playlists. Uses title parsing, regex, and YouTube metadata APIs.
- Schmaker: Calendar generator for NCSSM's rotating school schedule. Widely adopted and continued to be maintained by a nurtured student dev community. Built with serverless backend and Google Calendar API.
- Java projects showcasing knowledge of Spring Boot, MCP architecture, Controller-Service-Repo paradigm.

SKILLS JavaScript, TypeScript, React, Next.js, Angular, Vue, Svelte, Node.js, Java, Spring Boot, C#, .NET, Python, PHP, Go

HackNC 4 Year Competitor and Volunteer + 1st Place Accessibility Award – UNC eSports Smash Co-Head
